

ALEXANDRE GRAVEREAUX

New York, NY | GitHub: [alexgravx](#) | LinkedIn: [alexandre-gravereaux](#) | Portfolio: [alexgravx.com](#)

Education

Cornell Tech, Cornell University - New York, NY

Master of Engineering in Computer Science, merit scholarship recipient

May 2026

Coursework: Applied Machine Learning, Machine Learning Engineering, Trustworthy AI, Algorithms for Applications.

CentraleSupélec, Paris-Saclay University - Paris, France

Master of Science in Engineering and Applied Mathematics, GPA: 3.86/4

May 2025

Coursework: Statistics and Learning, Optimization, Object-oriented programming, Network & Security, Quantum Computing, Cloud & Distributed Computing, Web Data Intelligence.

Collège Stanislas - Paris, France

May 2022

Intensive preparation in Math, Computer Science and Physics for highly competitive entrance exams to the French Grandes Ecoles.

Technical Skills

Coding Languages: Python, JavaScript, Java basics, Go basics, Swift basics

DevOps: Docker, Kubernetes, Nginx, Gitlab CI/CD, TGI, Terraform, Ansible, IaC, bash, sysadmin

Data and ML: Pandas, Scikit, Pytorch, Langchain, Celery, MySQL, PostgreSQL, MongoDB, Spark basics

Fullstack: NodeJS, Express, React, Vue, Nextjs, Vercel

Professional Experience

Forvis Mazars, Software Engineer Intern - Paris, France

Sept 2024 - Feb 2025

- Developed several new features on a full-stack app for cash-pooling. The app processes the financial data of more than **50 subsidiaries** with Python, SQLAlchemy and Alembic.
 - Added a new category of document format called Kyriba format above the existing Diapason format.
 - Implemented a messaging system between the holding and its subsidiaries, including an email notification system.
- Improved a full-stack app for accounting financial data of a **\$100b+ revenue firm**, helping accountants find inconsistencies **60% faster**. Optimized its integration into an SAP workflow through a dedicated on-premise infrastructure.
 - Created the year-end reporting phase: at the start of the following year, financial data is finalized, enabling accountants to close the books. Used Python, Celery task scheduler, Linux crontab and MongoDB NoSQL database.
 - Updated and deployed the application with zero downtime for customers, and scaled server resources to ensure that the reporting phase could run concurrently with the first quarter of the new year.
- Designed and implemented a transpiler (code converter) from SAS language to R or Python, including CLI and RESTful API design. On relevant samples, it increased the translation speed **by x3** while maintaining a level of precision unreachable by LLMs. Used ANTLR as a lexer and parser to build an Abstract Syntax Tree (AST).

Paris Digital Lab, Software Engineer Student - Paris, France

Feb 2024 - Jul 2024

- Built 3 minimum viable products in a 7-week constraints for real-world business at [@ParisDigitalLab](#) incubator, through a selective gap-year program in partnership with CentraleSupélec school.
- Sencial: created an IOS companion app to help hearing-impaired people talk in noisy environments through AirPods, using audio modulation, allowing better voice perception for **89% of users**. Implemented with Swift.
- ElicCIR: developed a tax credit filing tool on a private infrastructure for **Thales** (Lockheed Martin French equivalent), using data parsing, generative AI and LLMs with RAG, enabling the company to **save 300k€ and 3000 hours each year**. Used Python and Text Generation Inference (HuggingFace TGI)
- Wiloki: optimized an EdTech company game-based learning platform's algorithm through A/B testing, aiming to accelerate middle-school student progress. Deployed simulation of hundreds of student profiles with randomized knowledge and skill levels using RabbitMQ queueing within a Kubernetes cluster. Implemented with Go, Javascript and Python.

Projects

B2B Storage space rental marketplace - [Link to website](#)

Developed a storage space rental platform for professionals, similar to Airbnb, including reservation, calendar and billing. Used Typescript, ExpressJS, Mantine and deployed with AWS; authorization with JWT.

Simulation trading platform - [Link to the platform](#)

Created a professional-style simulation trading platform, including order placement, order book, order matching and market data chart. Used Python, FastAPI, TradingView API and AI agents.

Club Experience

ViaRezo, Devops - Paris, France - [Link to website](#)

Sept 2022 - Jan 2024

- Maintained a network infrastructure and **provided Internet access to 2000+** residents, via fiber and Wifi.
- Managed a database of **10,000+ members** and operated several websites and applications related to CentraleSupélec's student life through an Openstack virtualization cluster and a Kubernetes cloud infrastructure, monitored with Datadog.
- Took part in organizing a **nationwide cybersecurity and intelligence hackathon** with the French government, including budgeting, equipment setup and staff scheduling - [TRACS](#)
